

2.w Peter | Peer Review

This week, I did my peer review with Asdren. It went really smooth and did not take much time, since our code was almost identical in most exercises. We still managed to find some small differences, which I will list below.

Set 2 Ex 1

Asdren called a print statement in his function (which had to be impure anyway) and I printed from main. Since the function was impure anyway (due to the Scanner), we believe the difference doesn't really matter outside of readability. We were not sure which was more readable.

Set 2 Ex 2

I printed the whole function call while Asdren saved his output into a variable first. This also does not affect readability or efficiency much, so we concluded that for now both approaches were fine.

Set 2 Ex 3

We came to the conclusion that it is better to return the function output and print in main, instead of printing out of the function. This improves readability and can make a function pure if there are no other impurities.
